

Incident SLA Packet IR-42

Gold customers: acknowledgement must occur within 10 minutes of the first qualifying production alert.

If acknowledgement is more than 15 minutes late beyond the acknowledgement SLA, each affected Gold customer receives a 250.00 service credit.

The public status page should be updated within 30 minutes of the first qualifying alert.

Silver customers: acknowledgement must occur within 30 minutes and no automatic service credit applies for acknowledgement delays under 60 minutes.

Noise: uptime percentage credits are calculated quarterly and are not part of this acknowledgement review.

Noise: staging and sandbox alerts are excluded from the SLA clock.

Noise: suspended accounts are excluded from automatic credits even if listed in customer exports.

Guidance: status-page delay is a risk flag but does not change the acknowledgement credit amount.
